

Dankann Weissmüller

Senior Software Engineer (Games) · Gameplay, DevOps Build Systems and Tooling

Porto Alegre, Brazil · dankann.weissmuller@gmail.com · dankann.github.io · linkedin.com/in/dankannweissmuller · github.com/Dankann

SUMMARY

Ten years shipping games across Unity and Unreal: gameplay systems, editor tooling and the CI/CD infrastructure behind a live free-to-play title. On Godforge I built and run the build and release platform: Jenkins pipelines on AWS infrastructure defined in Terraform, within a small DevOps team. Shipped C++ gameplay and UI on a multiplayer RPG on Steam. I have also led an engineering team across concurrent projects.

SKILLS

- **Engines and game tech:** Unity (UI Toolkit, Addressables, editor tooling), Unreal Engine (C++), PlayCanvas (WebGL), multiplayer networking, AR/VR
- **Languages:** C#, C++, Python, Groovy, JavaScript / Node.js
- **Platforms:** Android, iOS, Windows, macOS, WebGL, Steam
- **CI/CD and infrastructure:** Jenkins, Terraform, AWS (EC2, EBS, S3, Lambda, IAM, VPC), release engineering
- **Backend systems:** live game backends and web services, PlayFab, Beamable, Azure
- **Tools:** Perforce / Helix, Git

EXPERIENCE

Ironbelly Studios · Senior Software Engineer

Jun 2024 - Present · Remote

Godforge, a \$14M funded free-to-play title, live on four platforms with 30K alpha players.

- Architected the studio's CI/CD environment on AWS with Terraform: Jenkins, EC2 agent fleet, EBS workspaces, S3 artifacts.
- Run the multi-platform build and release pipelines used daily by roughly fifty developers and QA.
- Built the engineering team's online DevOps tooling on AWS Lambda, integrated with Perforce, Jenkins and Jira.
- Develop the game-configuration backend and its tooling: config served from S3 at startup, avoiding client and Addressables rebuilds.
- Migrated CI from bare-metal Jenkins to AWS without pausing releases; contributed to the backend's Azure migration.

Ironbelly Studios · Senior Unreal Engineer

Jan 2023 - Jun 2024 · Remote

Fractured Veil, a multiplayer RPG shipped on Steam.

- Shipped the crafting, inventory, quest and weather systems in C++ and Unreal Engine.
- Built the game's UI and widget layer and its audio systems.
- Developed internal Unreal plugins and frameworks reused across the project.

Ironbelly Studios · Lead Unity Engineer

May 2022 - Jan 2023 · Remote

- Led the engineering team across concurrent web and mobile game projects.
- Migrated Tribesters' backend from in-house services to Beamable microservices while the game was live, serving roughly 20,000 users.
- Ran code review and the team's code quality standards.

Ironbelly Studios · Senior Unity Engineer

Apr 2021 - May 2022 · Remote

- Delivered Unity gameplay and systems work across the studio's web and mobile titles, built on the team's MVC engineering patterns.

Realvi · Unity Engineer

Sep 2019 - Apr 2021 · Remote

- Built realtime multiplayer with Mirror networking and AWS GameLift for a VR/AR language-learning app.
- Implemented scene management and the NPC conversation state machine driving dialogue flows.
- Created multiple language-learning lessons using Unity's Timeline tool.

Main Leaf · Gameplay Engineer

Apr 2017 - Sep 2019

- Shipped two multi-platform titles in PlayCanvas (WebGL) and Unity, from zero to release.
- Developed a Unity multiplayer turn-based strategy game through pre-release production.

Dragontail Studio · Game Programmer

May 2016 - May 2017

- Gameplay programming in Unreal Engine on a city-management mobile game; first professional games role.

EDUCATION

- **UniRitter**, Porto Alegre, Brazil · Technology Degree, Video Game Development · 2014-2017
- **FIAP** · MBA, Software Engineering · in progress
